Coronavirus disease (COVID-19): Serology

9 June 2020 | Q&A

What is herd immunity?

Herd immunity is the indirect protection from an infectious disease that happens when a population is immune either through vaccination or immunity developed through previous infection. This means that even people who haven't been infected, or in whom an infection hasn't triggered an immune response, they are protected because people around them who are immune can act as buffers between them and an infected person. The threshold for establishing herd immunity for COVID-19 is not yet clear.

World Health Organization

Home / Newsroom / Q&A Detail / Coronavirus disease (COVID-19): Serology, antibodies and immunity

Coronavirus disease (COVID-19): Serology, antibodies and immunity

13 November 2020 | Q&A

What is herd immunity?

"Herd immunity", also known as 'population immunity', is a concept used for vaccination, in which a population can be protected from a certain virus if a threshold of vaccination is reached.

Herd immunity is achieved by protecting people from a virus, not by exposing them to it. Read the Director-General's 12 October media briefing speech for more detail.

Leren uit het verleden

“Het is maar een griepje!”

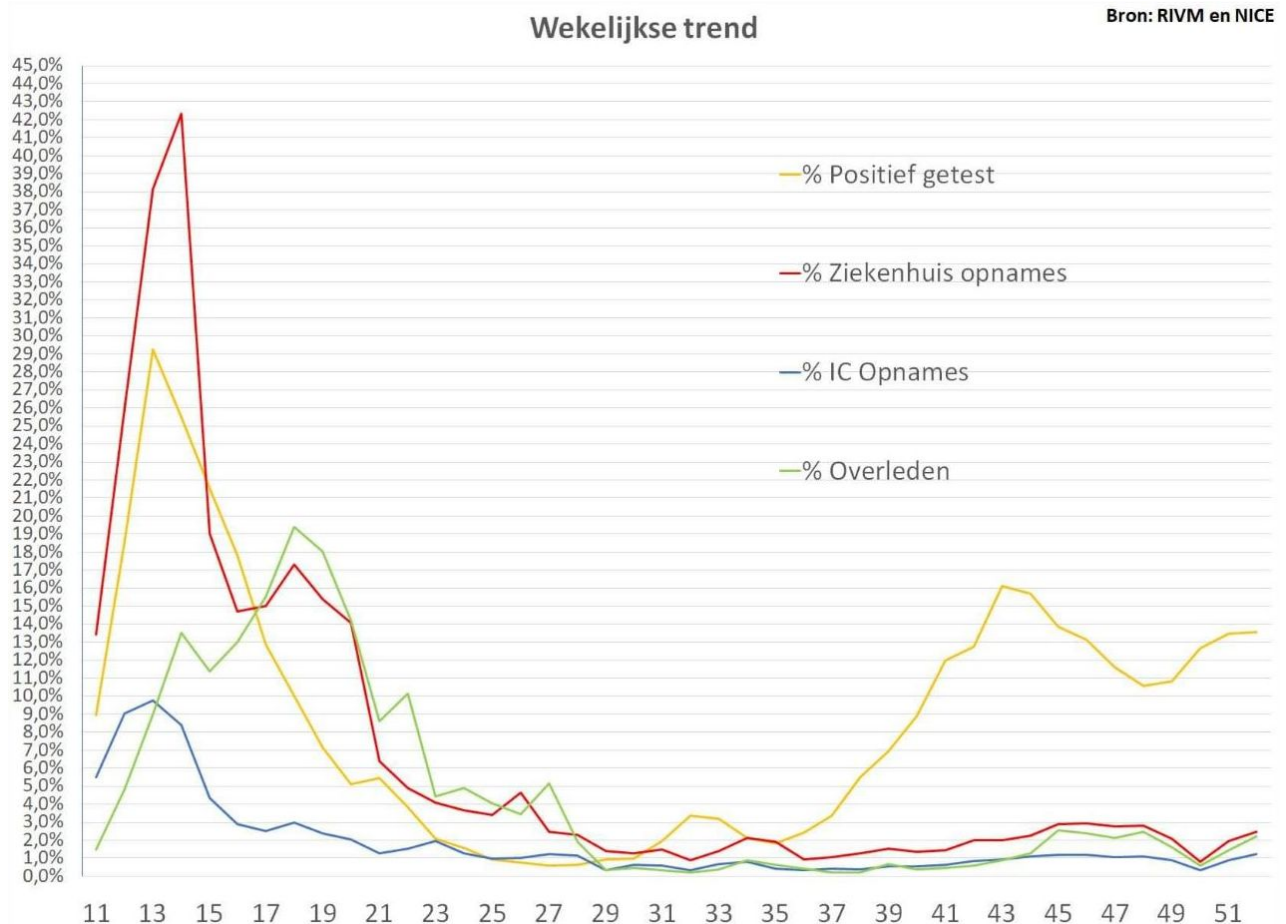

In voorgaande jaren lagen de ICs ook vol. Waar was de media al die jaren? Vergeet ook niet dat Rutte de afgelopen 10 jaar de helft van de IC capaciteit heeft wegbezuinigd.

The covid-test (RT-PCR): a tool for manipulation

... and constitutes scientific fraud by Prof C. Drosten and M. Koopmans

Note: the whole coronavirus pandemic and all its measures are justified by the PCR-test.

De RT-PCR test staat voor “reverse transcription polymerase chain reaction”. Het is een methodiek om een stukje genetisch materiaal te vermenigvuldigen. Dit gebeurt door middel van cycli van temperatuurveranderingen (hoog-laag) waarbij in elke cycli het aantal kopieën genetisch materiaal wordt verdubbeld. Dus 1, 2, 4, 8, 16,..., 1048576 (20 cycli). Dit genetisch materiaal (primer genaamd) dient exact dezelfde code te hebben als het genetisch materiaal dat je wilt meten, in dit geval het sars-cov-2 virus. De genetische code van het sars-cov-2 virus is echter heel lang, dus men kijkt alleen naar een stukje van het virus.

De test is echter geen zwart/wit test en kan niet aantonen of er daadwerkelijk een virus is. De test kan namelijk geen verschil maken tussen een levend virus en een dood stukje virus. Het aantal cycli dat gekozen wordt is erg belangrijk. Als je het aantal cycli hoger kiest heb je een grotere kans op een positieve uitslag: dus meer valse positieven. Ook werkt men vaak met meerdere primers om de betrouwbaarheid te verhogen. Als je het aantal cycli zou blijven verhogen dan krijg je altijd een positieve uitslag. Stel je verhoogt het aantal cycli van 30 naar 35 dan heb je 33 miljard ($2^{35}-2^{30}$) meer kopieën gemaakt en dus een veel grotere kans dat je een restje virus nog meet en de uitslag positief wordt. Bij meer dan 30 cycli is de test zeer onbetrouwbaar geworden. De volgende grafiek laat het percentage positieve virusculturen zien van samples met een positieve PCR uitslag. Bij 35 cycli kun je dus geen virus meer kweken maar wel een positieve uitslag hebben.

Percentage of positive viral culture of SARS-CoV-2 PCR-positive nasopharyngeal samples from Covid-19 patients, according to Ct value (plain line). The dashed curve indicates the polynomial regression curve. Source: <https://pubmed.ncbi.nlm.nih.gov/32342252/>

Vele landen gebruiken echter 35 of zelfs 40 cycli voor de PCR-test. De onderstaande bronnen tonen 100% bewijs dat er gefraudeerd wordt met deze test. Dus ben jij er zeker van dat ze straks de testen niet weer gaan aanpassen, zodat het net lijkt alsof het vaccin werkt?

But, there is more...

The Corona Vaccine - Do you take the risk?

What you should know...

- 1. A vaccine usually takes on average over 10 years to develop and side effects can still be discovered many years later.**
- 2. In September 2020 the UK Government changed the law so that all Covid-19 vaccines will be unlicensed due to lack of safety trials, so vaccine manufacturers will have zero liability.**
- 3. Pfizer have been fined \$4.7 billion for healthcare and safety violations since 2000.**
- 4. The MHRA stated in October 2020 that they were “urgently seeking an AI software tool to process the expected high volume of Covid-19 vaccine Adverse Drug Reactions (ADR’s)”**
- 5. In the instructions to healthcare practitioners on the UK government website for the Pfizer vaccine, it states that ‘it is unknown whether the Covid19 mRNA vaccine has an impact on fertility’. It also explains that the vaccine has NOT been tested on people with co-morbidities (exactly the people supposed to be most at risk), or to see how it interacts with other medicines.**
- 6. In his personal blog, Bill Gates explained how the Covid-19 vaccine will use an experimental technology that hasn’t previously been approved for human use.**
- 7. Robert F. Kennedy (nephew of JFK) says “mRNA vaccines intervene directly in the genetic material of the patient which represents the genetic manipulation, something that was forbidden. In my opinion, these new vaccines represent a crime against humanity”.**
- 8. The former VP of Respiratory at Pfizer, Michael Yeadon, says that the pandemic was over in June. Since June 2020, deaths in the UK have been in line with the 5 year average.**
- 9. Covid-19 has been shown to have a 99.97% recovery rate, higher than the effectiveness of the vaccine, so you have a better chance of recovering naturally.**
- 10. Did you know that that the average age of dying of Covid-19 is older than the normal average age of dying. Is an untested, experimental vaccine worth the risk?**
